Global Review Centers

From rapidly developing global investigations to high technology IP litigation, law firm and corporate clients often require reviewers under challenging circumstances such as accelerated time scales or specialised expertise requirements. To meet these challenges, clients can incur substantial costs, and experience delays as the right personnel are identified and repositioned to secure client or review partner sites.

Consilio's Secure Virtual Review, powered by Complete Review, provides a compelling, secure virtual review alternative to this traditional approach. Not bound by any specific client or Consilio review location, pre-screened qualified legal professionals are quickly engaged on projects operating within in a highly secure, virtual review environment. Consilio's review managers, licensed attorneys with specialised expertise conducting virtual review projects, manage reviewers to deliver a high-quality, consistent work product while controlling costs.

The Secure Virtual Review Difference

- **Expert review teams** - including subject matter experts or native language speakers are available to engage on projects quickly.
- **Highly experienced document review managers** – licensed attorneys with extensive hands-on discovery experience – provide oversight and supervision of all resources, remote or co-located, ensuring that you get the best results possible.
- **In-depth, timely reporting** showing the progress of a review, reviewer productivity, work product and quality control metrics.
- **Secure Virtual Review Technology**
 - **Strict identity controls** - Remote reviewers regularly verify their identity using advanced multi-factor authentication, preventing unauthorized users or hackers from hijacking accounts.
 - **100% audit ready** - All activity (logins, logouts, user activity, disconnects, etc.) are centrally stored in our secure, ISO-certified data centers. Audits on these secured records can locate any suspicious activity, providing an added layer of security.
 - **Clear data separation** - All users are allocated a unique and isolated remote desktop session, further enhancing security and eliminating the potential for data overlap between users.
 - **Secure data hosting** - Servers hosting client data are located on Consilio's ISO-certified private data centers secured with multiple layers of physical and software controls and can only be accessed by authorized personnel.

Simplified Secure Virtual Review Process

Secure Virtual Review CASE STUDY

POWERED BY  Complete Review

JD – PhD Required: Integrated On-Site and Secure Virtual Review

Client Challenge

- A life sciences IP patent litigation review was initially staffed with attorneys having both relevant legal expertise and Master's degrees in specific biomedical subject areas.
- Six months into the review, the production of complex documents by opposing counsel required a Ph.D. level of subject matter expertise for accurate understanding and issue coding.
- The combination of legal, academic, and Relativity document review specific knowledge challenged the traditional on-site model.
- Finding the right experts with relevant legal, scientific, and Relativity expertise within commuting distance to an existing – or even a temporary review center would be an insurmountable hurdle, regardless of the client's time and cost constraints.

Consilio Response

With client and outside counsel collaboration our teams implemented our Secure Virtual Review solution, which included:

- Recruitment teams that identified, vetted, and selected 5 JD/Ph.D. candidates from five different states across the country, including CA, FL, OH, NJ, and NY.
- Integrated the remote reviewers using a virtual desktop solution, with remote oversight and the same high level of security standards and data privacy restrictions governing their on-site review center colleagues.
- Created specific workflows to ensure that higher-level documents were reviewed solely by the PhD-level attorneys.

Results Achieved

- Consilio met the client's needs and increased the quality and efficiency of the review by having the expertise to implement and manage both traditional on-site and secure remote review teams.
- The JD-PhD reviewers were able to summarise and code tens of thousands of highly complex documents to improve the client's preparation for witness deposition and motion practice.
